SHOAIBUL HOQUE

AI WORKFLOW / PROMPT ENGINEER | DIRECTING AI-ASSISTED DEVELOPMENT

Phone: 7829860087
Email: shoaibulhoque2002@gmail.com
LinkedIn: Shoaibul Hoque
GitHub: github.com/shoaibul0926

EDUCATION DETAILS

1. **BMS Institute of Technology and Management, Bengaluru, India** 2021 - 2025
Bachelor of Engineering in Electronics and Communication
Cumulative CGPA: 7.48/10
2. **Narayan Residential PU College, Bengaluru, India** 2019 - 2021
PUC (PCMB)
Cumulative percentage: 83.33%
3. **Jindal Vidya Mandir, Ballari, Karnataka, India** 2018 - 2019
Class 10 (CBSE)
Cumulative Percentage: 80.00%

SUMMARY

Prompt engineer who designs the prompts, task breakdowns, and command workflows that direct AI coding agents (Claude Code) to build and ship full software products from requirements to live deployment. Owns every product decision: architecture, code review, debugging, testing, and release. Track record shipping deployed products: browser-based document Q&A with OCR and object detection, RAG pipelines, REST APIs, authentication (JWT, bcrypt), and a multi-game platform published on GitHub Pages and as a downloadable Android app.

SKILLS

- **Prompt & Workflow Engineering:** Prompt design, task decomposition, multi-step agent orchestration, Claude Code workflows
- **Prompt Engineering Techniques:** Few-shot and chain-of-thought prompting, system-prompt design, structured/JSON output design
- **AI & LLM Systems:** Anthropic & OpenAI APIs, RAG / vector search (Voyage AI embeddings, vectra), model selection & switching
- **Product Oversight:** Requirements definition, code review & QA, debugging, testing, release management, architecture decisions
- **Web & Backend (AI-directed build):** JavaScript, TypeScript, React, Python, HTML/CSS, Node.js/Express, REST APIs, JWT, bcrypt
- **Tools & Deployment:** Git/GitHub, GitHub Pages, GitHub Actions (CI/CD), Vite/Vitest, PWA, Capacitor (Android APK builds)

PROJECTS

1. **Chat Buddy: AI Chat & Document Assistant**
   - Designed the prompt workflow that directed Claude Code to build an AI chat app with streaming responses across Anthropic and OpenAI models, model switching, custom system prompts, and multi-conversation chat with folders, search, and themes.
   - Specified and reviewed a RAG pipeline for document Q&A over PDF/DOCX/TXT (vector search via vectra and Voyage AI embeddings), along with AI image generation & editing and image intelligence (OCR, object detection, and image captioning).
   - Directed the move to a fully client-side app on IndexedDB (PDF/DOCX extraction, OCR with Tesseract.js, object detection with TensorFlow.js). Owned QA and release: 69 automated backend tests and automated GitHub Actions deployment to GitHub Pages.
2. **PixelDeck: Retro Arcade Game Hub**
   - Directed the build of a front-end hub aggregating 16 independently-built, independently-deployed browser games in one place.
   - Designed the architecture for a single-source game registry so adding a new game requires no changes elsewhere in the codebase.
   - Directed packaging as an Android app (Capacitor), built and published as a GitHub Release by GitHub Actions on every push.
3. **To-Do List App**
   - Directed a React/TypeScript to-do app: priorities, due dates, a pinned Focus task, filters, inline editing, and undo for deletes.
   - Specified pure, unit-tested logic (48 Vitest tests) and swappable storage, so a cloud backend can be added without UI changes.
   - Directed an installable offline PWA and an Android APK (Capacitor), deployed by GitHub Actions to GitHub Pages and Releases.
4. **Resume ATS Analyzer**
   - Designed an AI resume analyzer workflow: ATS score, missing-keyword gaps against a job description, and AI-rewritten bullets.
   - Specified a 0-100 ATS scoring engine across four categories: keyword match, formatting, content quality, and readability.
   - Directed a Node/Express backend that parses PDF/DOCX/TXT in memory, with AI rewriting, a rule-based fallback, and unit tests.
5. **Browser Game Collection**
   - Independently directed and shipped 16+ single-file HTML5/JS games, from Snake and Sudoku to a Mario-style platformer.
   - Covered arcade, puzzle, and action genres, including a Flappy Bird clone, Brick Breaker, Number Merge, Simon, and Fruit Slice.
   - Owned release: each game lives in its own repository, deployed live on GitHub Pages and launched from the PixelDeck hub.
6. **Scientific & Casio-Style Calculators**
   - Directed a scientific calculator with scientific, programmer/base-N, complex, matrix, equation, calculus, and statistics modes.
   - Directed a Casio FX-991EX-style calculator with 9 modes, from COMP and STAT to MATRIX, BASE-N, and CALCULUS.
   - Shipped both as standalone single-file HTML/CSS/JS apps, each in its own repository and live on GitHub Pages for anyone to try.

AREAS OF INTEREST

1. Prompt & Workflow Engineering
2. AI-Assisted Development
3. Product Building & Automation
